

A man with a grey beard and hair, wearing a blue jacket over a light blue shirt and khaki pants, is walking a brown and white dog on a leash. They are on a paved path in a park with green grass and trees in the background. A wooden trash can is visible on the path. The text 'WHAT COMES NEXT?' is overlaid in large yellow and white letters.

WHAT COMES NEXT?

WE DO THE SAME WALK EVERY DAY. SO WHY DO I KEEP FORGETTING THE WAY?

We're all forgetful sometimes. But if your forgetfulness is caused by Alzheimer's disease, you may be interested in the GRADUATE II clinical study.

Please take a flyer to learn more.

Signs and symptoms of Alzheimer's disease

We all experience memory issues from time to time. But experiencing the following more and more often may be an early sign of Alzheimer's disease:

- Misplacing items or forgetting their names
- Difficulty completing familiar tasks
- Trouble following familiar routes
- Trouble remembering recent conversations
- Trouble remembering words and names
- Difficulty making decisions

Could GRADUATE II be your next step?

The GRADUATE II clinical study will assess how safe and effective an investigational drug is at slowing the progression of early (also known as 'prodromal') or mild Alzheimer's disease. To qualify, participants must:

- Be 50–90 years old
- Have mild Alzheimer's disease or memory problems that may be the early symptoms of the condition
- Have someone they see frequently and who is willing to act as their 'Study Partner'

What this study involves

The total length of the GRADUATE II study is 3 years, including screening and follow-up. The dosing period of the study will last for 2 years, during which half of the participants will be given the investigational drug and half will be given a placebo (a dummy drug that contains no active ingredients). These will be given as subcutaneous (under the skin) injections at a study clinic or at home, once every 2–4 weeks. Participants will not know which group they have been assigned to. But please be assured that every participant will receive the same close monitoring throughout via regular clinic visits, regardless of their group.

What else should I know?

All study-related drugs and assessments will be provided at no cost to participants. Travel reimbursement may also be included. Of course, taking part in a clinical study is a personal decision and no one has to join if they don't want to. It's also important to know that if participants join the study and then change their mind, they can leave at any time without any impact on their usual healthcare.
