

# Help us understand how Alzheimer's Disease affects the brain's electrical activity.

---

## What is our study about?

We want to see if there are brainwave abnormalities in the brains of people with Alzheimer's Disease and determine whether there is a distinct brainwave signature for Alzheimer's Disease. This is a study where you will wear a portable EEG, play memory games on an iPad, and then wear the device home for 3 days!

## Are you eligible to participate?

You may qualify if you are 50 to 90 years old, have amnesic mild cognitive impairment or Alzheimer's Disease, and have no history of seizures or brain injury.

## What will you receive?

Eligible participants will receive up to \$100 for completing the study, along with the satisfaction of knowing that they are contributing in the fight against understanding Alzheimer's Disease.

## How do you sign up?

To sign up for our study, or to get more information please contact:
